

# Bloomberg Government's Top-Performing Lobbying Firms of 2017

- 38 lobbying firms made list amid record year for business
- List uses revenue, customer retention to pick and rank firms

By Jorge Uquillas | March 6, 2018 2:48PM ET

A new administration and once-in-a-generation rewrite of the tax code helped make 2017 a record year for lobbying firms.

Lobbying spending increased to \$1.53 billion last year, the highest annual revenue total since 2011. The 9.1 percent year-over-year growth in revenue was also the highest rate of increase in a decade.

Bloomberg Government predicted a [“Trump bump” in lobbying](#) that came to fruition as companies, associations, and local governments hired lobbyists to work on legislation to repeal and replace Obamacare, the administration’s action on trade, and the annual battle over spending. The successful effort to overhaul the tax code in the last three months of 2017 provided a burst of revenue to what was already a very remunerative year for lobbyists.

Two-thirds of the largest lobbying firms—those with at least \$1 million in lobbying revenue in 2017—grew last year. That’s in sharp contrast to lobbying firm performance in 2016, when 51 percent of firms reported lower revenue year-over-year.

With last year’s lobbying data now filed and tallied, Bloomberg Government has reviewed the numbers and used our proprietary business analytics to identify the year’s top-performing lobbying firms.

Of roughly 1,934 lobbying firms that filed disclosure reports with the Senate during 2017, 38 met all of our criteria—eight more than last year—and are included in the top performer list. The 38 firms earned a combined total of \$200 million in lobbying revenue in 2017, about 11 percent of all external lobbying spending.

The No. 1 firm, [Federal Advocates Inc.](#), increased its revenue by 214 percent in 2017, and reported an additional six lobbyists. Two of Federal Advocates’ new clients in 2017, Coyote Spring Investment LLC and Albert D. Seeno Construction Co., contributed about half of the firm’s revenue.

Law firms with lobbying teams, which we call lobbying/law firms and are analyzed using different criteria, will be profiled in the second part of our top-performers analysis, to be published tomorrow.

## Methodology

Bloomberg Government analyzed Lobbying Disclosure Act filings to identify lobbying firms that met the \$1 million threshold and exceeded the following five business performance criteria:

- Growth in revenue
- Growth in average revenue per client
- A one-year retention rate of 80 percent or more
- A three-year retention rate of 60 percent or more
- Revenue per registered lobbyist of \$400,000 or more

Relative performance in each of the five business performance criteria was then calculated to determine the placement of the 38 firms on the list.
